Introduction to deep learning
Quiz, 10 questions

✔ **Congratulations! You passed!**

Next Item

✔ 1 / 1
points

1.
What does the analogy "AI is the new electricity" refer to?

○ AI runs on computers and is thus powered by electricity, but it is letting computers do things not possible before.

○ AI is powering personal devices in our homes and offices, similar to electricity.

○ Through the "smart grid", AI is delivering a new wave of electricity.

○ Similar to electricity starting about 100 years ago, AI is transforming multiple industries.

Correct
Yes. AI is transforming many fields from the car industry to agriculture to supply-chain...

points

2.
Which of these are reasons for Deep Learning recently taking off? (Check the three options that apply.)

☐ We have access to a lot more data.

Introduction to deep learning

Quiz, 10 questions

10/10 points (100%)

☐   We have access to a lot more computational power.

▲

Correct

Yes! The development of hardware, perhaps especially GPU computing, has significantly improved deep learning algorithms' performance.

☐   Deep learning has resulted in significant improvements in important applications such as online advertising, speech recognition, and image recognition.

▲

Correct

These were all examples discussed in lecture 3.

☐   Neural Networks are a brand new field.

▲

Un-selected is correct

✔   1 / 1
points

3.

Recall this diagram of iterating over different ML ideas. Which of the statements

Introduction to deep learning below are true? (Check all that apply.)

10/10 points (100%)

☐ Being able to try out ideas quickly allows deep learning engineers to
iterate more quickly.

▲

Correct

Yes, as discussed in Lecture 4.

☐ Faster computation can help speed up how long a team takes to iterate
to a good idea.

▲

Correct

Yes, as discussed in Lecture 4.

☐ It is faster to train on a big dataset than a small dataset.

▲

Un-selected is correct

☐ Recent progress in deep learning algorithms has allowed us to train good
models faster (even without changing the CPU/GPU hardware).

▲

Correct

Yes. For example, we discussed how switching from sigmoid to ReLU
activation functions allows faster training.

Quiz, 10 questions

10/10 points (100%)

✅ 1 / 1
    points

4.
When an experienced deep learning engineer works on a new problem, they can
usually use insight from previous problems to train a good model on the first try,
without needing to iterate multiple times through different models. True/False?

◯ True

🟢 False

▲

Correct
Yes. Finding the characteristics of a model is key to have good
performance. Although experience can help, it requires multiple iterations
to build a good model.

✅ 1 / 1
    points

5.
Which one of these plots represents a ReLU activation function?

◯   Figure 1:
Introduction to deep learning
Quiz, 10 questions

○ Figure 2:

○ Figure 3:

Introduction to deep learning
Quiz, 10 questions

Correct
Correct! This is the ReLU activation function, the most used in neural networks.

○   Figure 4:

Introduction to deep learning

6.

Images for cat recognition is an example of "structured" data, because it is represented as a structured array in a computer. True/False?

10/10 points (100%)

◯ True

◯ False

▲

Correct

Yes. Images for cat recognition is an example of "unstructured" data.

✔ 1 / 1
   points

7.

A demographic dataset with statistics on different cities' population, GDP per capita, economic growth is an example of "unstructured" data because it contains data coming from different sources. True/False?

◯ True

◯ False

▲

Correct

A demographic dataset with statistics on different cities' population, GDP per capita, economic growth is an example of "structured" data by opposition to image, audio or text datasets.

✔ 1 / 1
   points

8.

Why is an RNN (Recurrent Neural Network) used for machine translation, say translating English to French? (Check all that apply.)

☐ It can be trained as a supervised learning problem.

▲

Introduction to deep learning

Quiz, 10 questions   **10/10 points (100%)**

☐   It is strictly more powerful than a Convolutional Neural Network (CNN).

▲

Un-selected is correct

☐   It is applicable when the input/output is a sequence (e.g., a sequence of words).

▲

Correct

Yes. An RNN can map from a sequence of english words to a sequence of french words.

☐   RNNs represent the recurrent process of Idea->Code->Experiment->Idea->....
▲

Un-selected is correct

✔   1 / 1
     points

9.

Introduction to deep learning

Quiz, 10 questions

10/10 points (100%)

○   • x-axis is the input to the algorithm

     • y-axis is outputs.

○   • x-axis is the performance of the algorithm

     • y-axis (vertical axis) is the amount of data.

◉   • x-axis is the amount of data

     • y-axis (vertical axis) is the performance of the algorithm.

     ▲

Correct

○   • x-axis is the amount of data

     • y-axis is the size of the model you train.

✔   1 / 1
     points

10.

Assuming the trends described in the previous question's figure are accurate (and hoping you got the axis labels right), which of the following are true? (Check all that apply.)
